Introducing the first Micro Four Thirds lens from Tamron: High-power all-in-one™ zoom in a choice of two colors.

Developed by Olympus Imaging and Panasonic, Micro Four Thirds is a new system standard for compact mirrorless interchangeable-lens cameras that enables users to capture high-quality images using smaller, lighter equipment. Now, Tamron has expanded the possibilities of the Micro Four Thirds system with an innovative 14-150mm zoom lens (equivalent to 28-300mm in the 35mm and full-frame formats). This 10.7x zoom weighs only 285g (10.1oz) and has a compact form factor that accepts a 52mm diameter filter. Available in a sophisticated black or silver finish, this unique lens makes it easy to compose and capture sharp pictures over a very wide range of shooting conditions. It’s ideal for travel, family, and creative photography.

* Camera bodies shown are made by Panasonic (left) and Olympus (right).
* Cameras are shown with Tamron lenses attached.
